

CAROTAGGIO CONTINUO VELOCE

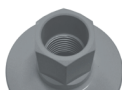

Questa linea di corone diamantate è adatta per carotaggi di profondità compresa tra 1 e 6 mt e diametro max 127 mm.

A differenza del carotaggio continuo tradizionale, il carotaggio continuo veloce presenta pesi notevolmente ridotti, grazie allo spessore dell'acciaio paragonabile ad una classica corona diamantata. Per lo stesso motivo è possibile utilizzare carotatrici con raffreddamento ad acqua tradizionali, con potenza compresa tra 2600 e 4200 W.

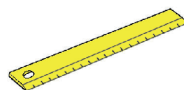

Rispetto al carotaggio tradizionale questo sistema permette la realizzazione del foro avvitando le prolunghe una all'altra mantenendo la carota all'interno della corona.

**PER USO
AD ACQUA**

**ATTACCO
1"1/4 F**

**LUNGHEZZA
450 MM**

TABELLA TECNICA

CORONE IMPREGNATE

Adatte per forare:

Graniti - Porfidi - Pietra - Calcestruzzo - Calcestruzzo Armato - Calcestruzzo Molto Armato
